ADP is a standardized extract of the oil of oregano, emulsified in a sustained release form. ADP is useful in toxic bowel syndrome, parasites, candida and other fungal/yeast problems of the bowel and genital-urinary tract. We have also found that ADP can be useful for upper respiratory bacterial infections. As time goes on, we are finding that the product is perhaps as useful, or more useful, with many resistant infections, than it is in yeast problems. Upper respiratory infections are often antibiotic resistant. In those cases where antibiotics are not completely successful, we have had excellent results with ADP. Until we learned how to use ADP clinically, we had some cases where we were not completely successful. We later found the reason was because we did not dose it heavily enough in the initial stages of therapy. The laboratory and clinical studies that were completed with the product indicated ADP was effective at three or four tablets 3 times daily. We later found that you should use it at five or six tablets three times a day for a week and then three or four tablets three times a day for the following four weeks.

We're also starting to see some results using ADP with amoebic parasitic infestations of the bowel and with *Helicobacter pilori* problems. The *H. pilori* bacterial infection in the stomach is a major cause of a great deal of the stomach ulcer problems we see.

We've also found that if you crush a couple of tablets of ADP, mix it with three or four drops of Bio-D-Mulsion in four or five ounces of pure water and gargle with it; it works very nicely for a sore throat. If you use ADP at heavy doses for an extended period of time, you will probably need to reestablish the friendly bacterial flora in the bowel (*Biodophilus-FOS* or *Lactozyme*).

Basically we have found that ADP can act like an antibiotic and sterilize the bowel. Again, be sure that anytime you've used ADP for more than two weeks that you introduce *lactobacillus*.

ADP also works well for helping to prevent illness from food and water-borne pathogens. It is always a good idea to take ADP along with *Hydrozyme* when visiting countries where public health and hygiene is suspect.

PRODUCT DESCRIPTION

A.D.P. (Patent Pending)

**Each tablet supplies:

Standardized extract of oregano 50 mg
(Emulsified sustained release form)

WARNING: Not recommended for pregnant or lactating women.

SUGGESTED USE: One (1) tablet with meals and at bedtime or as otherwise directed by health care professional.

Contains: 60 Tablets, 120 Tablets
Product #: 1101, 1104
NDC: 55146-01101, 55146-01104

ADDENDUM

Biotics Research Corporation is committed to developing new products that combine the best of Science and Nature to assist physicians in improving the health of their patients. As part of our long term Research and Development program, our phytochemistry and microbiology laboratories carefully studies the anti-Candida properties oil of oregano. This research has been published in the Journal of Applied Nutrition in 1995. Using quantitative methods, we demonstrated that the minimum inhibitory concentration for blocking the growth of three different strains of *C. albicans* was less than 0.1 microgram per ml. In sharp contrast, the minimum inhibitory concentration for caprylate, a popular antifungal agent, was 5000 fold greater.

A.D.P. is emulsified for increase bioavailability

Biotics Research Corporation is widely known for its emulsified fat-soluble nutrients and other lipids. They microemulsify these ingredients with the practical objective of increased bioavailability and intestinal absorption. This technology has also been applied to oil of oregano. By emulsifying oregano extracts, the effective surface area of the oil is dramatically increased.

In addition, they applied sustained nutrient release technology, perfected at Biotics Research Corporation, to A.D.P. The sustained release mechanism is designed to increase absorption. This process assures a slow release of oil of oregano throughout the intestinal tract. Therefore, the combined effects of emulsification and sustained release mechanism enhance intestinal exposure to the essential oil, with the overall aim of normalizing intestinal flora and supporting normal gastrointestinal functioning.
